Technical Data Sheet StoSilent Top Basic

Organic, porous substrate coating for StoSilent acoustic systems

Technical data

Criterion	Standard / test specification	Value/ Unit	Notes
Density	EN ISO 2811	1.3 - 1.5 g/cm ³	
Water vapour diffusion- equivalent air layer thickness µ	EN ISO 7783		V1 high
Reaction to fire (class)	EN 13501-1	A2-s1, d0	
PH value		9.3	
Light reflectance value		71	
Degree of whiteness		49 %	

The characteristic values stated are average values or approximate values. Due to the natural raw materials in our products, the stated values can vary slightly in the same delivery batch; this does not affect the suitability of the product for its intended use.

Substrate

Requirements	The substrate must be firm, dry, clean, lo efflorescence and release agents. Damp or not fully cured substrates can le as blisters or cracks. Do not use the prod	ad to defects in subsequent	coats, such
Preparations	StoSilent Distance: Board joints must be filled and sanded ev the aid of a metal rod or glancing light, ch are visible. If necessary, touch up these s	neck if the surface is uneven	
	StoSilent Direct: Board joints must be filled if the design is seamless, check the intermediate coat fo necessary. Only then apply the finish.		
	StoSilent Modular 400: Board joints must be filled and sanded ev	ven.	
Application

StoSilent Board 100, StoSilent Board 200, StoSilent Board 300, StoSilent Board MW 100
System adhesive: StoSilent Distance: StoSilent Fix StoSilent Direct: StoSilent Coll MW
Intermediate coat: StoSilent Top Basic
Finish: StoSilent Top Finish or StoSilent Top Basic
manually, by machine, spray with a hopper gun
Step 1: Manually: Apply StoSilent Top Basic to the acoustic carrier boards with the Sto-Swiss Smoothing Trowel Notched (4×4) starting at the edge and working transversely to the main light incidence direction. It is vital that enough material is applied during this work step. At this stage, appearance is of secondary importance.
By machine: For the low pressure method of application by machine, use a Peristaltic conveying pump (e.g. inoBEAM M8), a conveying pump with stator (e.g. Strobot 406 RS), or a Sto-Hopper Gun. Use a compressor with a suction capacity of at least 360 l/min to ensure sufficient air quantity (e.g. V-Meko 400). nozzle size: 4 - 6 mm, flow: 0 - 15 l/Min, air pressure: 1.5 - 2.5 bar. Use a test surface to adjust the spray pattern by adapting the air quantity and conveying output. distance between the application device and coating surface If necessary, carry out any additional measures (e.g. lower the scaffolding).
Work step 2: comb off the fresh layer with the Sto-Swiss Smoothing Trowel Notched (4 x 4) in a criss-cross pattern. The first notching runs transversely to the main light incidence direction, the second notching runs parallel.
Notching 1: press the finishing trowel strongly and uniformly at an angle of approx. 30° - ideally until scraping is heard.
Do not comb off the material in the edge zone (approx. 3 cm in width), in order to later smooth the visually flawless coating.
Notching 2: comb off the layer with the Sto-Swiss Smoothing Trowel Notched (4 x 4) parallel to the main light incidence direction.

	Applying uniform pressure, smooth the coating using a Sto rust-free finishing spatula, holding it at an angle of approx. 10°. When smoothing, trowel off as little material as possible.
	Smooth first the edge zones and then the entire surface. Ensure that no trowel grooves are still visible. To conclude deburr the entire surface. If the StoSilent Profile AP 210 stop profile is used, use it as a smoothing ridge (only applies to StoSilent Top Basic as an intermediate coat).
	StoSilent Top Basic as an intermediate coat: After the drying time (36 or 48 hours) has ended, remove any protruding material and ridges with caution. Do not sand StoSilent Top Basic fully-faced. The quality of the intermediate coat is vital for the quality of the finish.
	StoSilent Top Basic as a finish: To conclude smooth the surface. When the surface becomes matt, start smoothing the coating (depending on the ambient room temperature and humidity after approx. 15 - 45 minutes). First smooth the edge zone with the special plastic Sto- Finishing Trowel Profi (1 mm). Then smooth the entire surface starting from the edge zone with the Sto-Special Smoothing Trowel. Observe the current application guidelines of the respective acoustic system.
	In glancing light the ceilings are not free from visible unevenness.
	renovation and cleaning: See the StoSilent Planning Manual or obtain information from a Sto technical consultant.
Drying, curing, ready for next coat	High humidity, low temperature and reduced air exchange prolong the drying time. fully dry: StoSilent Top Basic natural: after approx 36 hours StoSilent Top Basic white: after approx. 48 hours StoSilent Top Basic tinted: after approx. 48 hours
	· · · ·
Cleaning the tools	Clean tools with water immediately after use.
Notes, recommendations, special information, miscellaneous	Observe the general Sto application guidelines for StoSilent acoustic systems. They are available from Sto SE & Co. KGaA. Only install and/or coat the product after training.
	Recommendation: installation on walls outside areas subject to a risk of impact, above a height of 2 m.
